

EDITORIAL INDEX

THIS INDEX is a composite listing of all features (in italics), news and business articles, and columns published by **DIAGNOSTIC IMAGING** in 1986. Articles are listed by subject and are cross-referenced as appropriate. An index of editorial contributors is included at the end.

ABDOMINAL IMAGING

AIDS: Imaging an epidemic, January, p. 54.
Role of pediatric imaging in abdominal emergencies, March, p. 102.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Percutaneous methods rival biliary endoscopy, May, p. 24.
 Agents assist in MRI diagnosis of breast, liver lesions, May, p. 30.
 Chemical agent dissolves gallstones in vivo in 12 hours, September, p. 11.
 MRI identifies splenic hematoma and diffuse disease, September, p. 25.
Sonography's impact on abdominal needle biopsy, September, p. 128.
 Fast scanning helps make abdominal MRI of more than academic interest, October, p. 137.
 Research groups claim MRI better than CT in liver, November, p. 11.
 Doppler ultrasound of practical value in abdominal and blood flow studies, November, p. 247.
 Fluoroscopy exam proves accurate in regional enteritis, December, p. 31.

AIDS IMAGING

AIDS: Imaging an epidemic, January, p. 54.
 No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 Gallium scans offer advantages in AIDS patients, December, p. 11.

ARTHROGRAPHY

Arthrography helps detect meniscal lesions in knee, January, p. 76.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Researchers detail potential errors in shoulder ultrasound, June, p. 15.
 MRI evaluates shoulder disorders, meniscal tears, July, p. 36.
Algorithms aid selection of hip imaging techniques, July, p. 94.
 CT proves useful in pediatric hip, lung disorders, August, p. 42.
Scrutinizing knee joints: MRI offers new insight, August, p. 90.
 CT and MR imaging aid assessment of sports injuries, September, p. 15.

BLOOD FLOW

New MR technique may offer measure of blood flow, February, p. 27.
Doppler harnesses flow in pediatric imaging,

March, p. 94.
Flow MRI holds promise in vascular diagnosis, May, p. 84.
Xenon CT helps reveal blood flow disorders, May, p. 92.
Diagnosis and management merge in clinical PET, August, p. 106.
Imaging the heart: diagnostic options flourish, October, p. 86.
 Multiphase mode and cine display permit dynamic flow MR imaging, October, p. 163.
Doppler blood flow imaging: integrating flow with tissue data, November, p. 146.
 Doppler ultrasound of practical value in abdominal and blood flow studies, November, p. 247.

BONE MINERAL ANALYSIS

No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 Imaging osteoporosis: a new bone to pick, May, p. 5.
 Quantitative techniques stretch CT in musculoskeletal imaging, May, p. 156.
 QCT bone data can vary widely between systems, June, p. 45.
 Commercial infighting may be blurring value of bone mineral analysis systems, June, p. 53.
DPA gaining strength in bone scanning debate, June, p. 102.
 One clinic's approach to osteoporosis, June, p. 104.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 Absorptiometry assesses therapy and fracture risk, November, p. 35.
Is CT past its prime? Not by the looks of it, November, p. 202.

BRAIN MAPPING

EEG maps may register little more than 'stray currents on the front panel', April, p. 142.
 Magnetic activity maps of the brain show what CT and MR cannot, May, p. 154.

BUSINESS & MARKETING

They came to praise CT, not to bury it, January, p. 5.
 NEMA and ACR approve standard for DIM interface, January, p. 16.
 Technicare contests federal court ruling on Fonar MRI patent, January, p. 29.
 RSNA exhibitors reassure physicians by following up on marketing hype, January, p. 33.
 Approved nonionic contrast agents pose cost quandary, February, p. 51.
 Finnish firm's 0.02-tesla unit installed in ER, February, p. 54.
 Report claims GE will offer low-field MR image by 1987, February, p. 56.
 Ausonics banks on multimodality breast imaging, February, p. 58.
 Suppliers help interventionalists in struggle to broaden influence, February, p. 62.
 Restrictions on health services limit imaging devices in Europe, February, p. 77.
 Radiologists modify adult-size systems for

pediatric work, March, p. 51.
 Phillips becomes more aggressive in digital market, March, p. 54.
 ADAC cuts staff by 25% in effort to pay off debt, March, p. 54.
 Slower sales and mature technology belie mammography's explosive potential, March, p. 60.
 Imatron takes aim at radiology market with dual-mode unit, April, p. 43.
 Field Effects working with GM on MRI system, April, p. 44.
 Resonex seeks sites for 0.4-tesla resistive MR imager, April, p. 49.
 GE will acquire Technicare assets, service contracts, May, p. 47.
 E-Z-Em searches for market niches to invest its cash, May, p. 61.
 Technicare users in quandary over future of MR units, June, p. 49.
 A radiologist watches Wall Street: whither 'General Electriccare?', June, p. 50.
 Commercial infighting may be blurring value of bone mineral analysis systems, June, p. 53.
 Comparable pricing and quality make film a commodity, July, p. 47.
 Technicare soothes anxious customers; GE disquiets buyers, July, p. 55.
 Spotty sales show physician split over nonionics, July, p. 62.
 Suppliers excite prospective buyers with lower-priced PET systems, July, p. 65.
 GE will sustain MR development for Technicare sites, August, p. 51.
 MIT begins work on sodium imaging using IBM magnet, August, p. 53.
 Berlex will submit gadolinium agent for FDA review, August, p. 53.
 MR vendors encourage outside help in developing market for local coils, August, p. 61.
 To drive out inferior products, new devices must offer added value, August, p. 172.
 Ultrasound back from edge of commercial oblivion, September, p. 5.
 GE appoints medical unit head to R & D laboratory, September, p. 55.
 Squibb spins off ATL ultrasound into new firm, September, p. 55.
 Japanese seek MR system costing under \$500,000, September, p. 61.
 Matrix acquires phosphor assets from DigRad, September, p. 65.
 Phased arrays signal era of growth and improved status for ultrasound, September, p. 85.
 Acuson whiz kid fazes his competitors, September, p. 88.
 Fonar permanently in the fray despite its technical problems, September, p. 159.
 MRI equipment prices will fall as competition heats up, September, p. 192.
 GE and J & J sign agreement on Technicare, October, p. 51.
 A radiologist watches Wall Street: beware of stocks with lofty P/Es, October, p. 52.
 Plenty of bridges yet to cross on road to digital radiography, October, p. 155.
 Of basketball shoes and the quid pro quo,

EDITORIAL INDEX

THIS INDEX is a composite listing of all features (in italics), news and business articles, and columns published by **DIAGNOSTIC IMAGING** in 1986. Articles are listed by subject and are cross-referenced as appropriate. An index of editorial contributors is included at the end.

ABDOMINAL IMAGING

AIDS: Imaging an epidemic, January, p. 54.
Role of pediatric imaging in abdominal emergencies, March, p. 102.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Percutaneous methods rival biliary endoscopy, May, p. 24.
 Agents assist in MRI diagnosis of breast, liver lesions, May, p. 30.
 Chemical agent dissolves gallstones in vivo in 12 hours, September, p. 11.
 MRI identifies splenic hematoma and diffuse disease, September, p. 25.
Sonography's impact on abdominal needle biopsy, September, p. 128.
 Fast scanning helps make abdominal MRI of more than academic interest, October, p. 137.
 Research groups claim MRI better than CT in liver, November, p. 11.
 Doppler ultrasound of practical value in abdominal and blood flow studies, November, p. 247.
 Fluoroscopy exam proves accurate in regional enteritis, December, p. 31.

AIDS IMAGING

AIDS: Imaging an epidemic, January, p. 54.
 No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 Gallium scans offer advantages in AIDS patients, December, p. 11.

ARTHROGRAPHY

Arthrography helps detect meniscal lesions in knee, January, p. 76.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Researchers detail potential errors in shoulder ultrasound, June, p. 15.
 MRI evaluates shoulder disorders, meniscal tears, July, p. 36.
Algorithms aid selection of hip imaging techniques, July, p. 94.
 CT proves useful in pediatric hip, lung disorders, August, p. 42.
Scrutinizing knee joints: MRI offers new insight, August, p. 90.
 CT and MR imaging aid assessment of sports injuries, September, p. 15.

BLOOD FLOW

New MR technique may offer measure of blood flow, February, p. 27.
Doppler harnesses flow in pediatric imaging,

March, p. 94.
Flow MRI holds promise in vascular diagnosis, May, p. 84.
Xenon CT helps reveal blood flow disorders, May, p. 92.
Diagnosis and management merge in clinical PET, August, p. 106.
Imaging the heart: diagnostic options flourish, October, p. 86.
 Multiphase mode and cine display permit dynamic flow MR imaging, October, p. 163.
Doppler blood flow imaging: integrating flow with tissue data, November, p. 146.
 Doppler ultrasound of practical value in abdominal and blood flow studies, November, p. 247.

BONE MINERAL ANALYSIS

No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 Imaging osteoporosis: a new bone to pick, May, p. 5.
 Quantitative techniques stretch CT in musculoskeletal imaging, May, p. 156.
 QCT bone data can vary widely between systems, June, p. 45.
 Commercial infighting may be blurring value of bone mineral analysis systems, June, p. 53.
DPA gaining strength in bone scanning debate, June, p. 102.
 One clinic's approach to osteoporosis, June, p. 104.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 Absorptiometry assesses therapy and fracture risk, November, p. 35.
Is CT past its prime? Not by the looks of it, November, p. 202.

BRAIN MAPPING

EEG maps may register little more than 'stray currents on the front panel', April, p. 142.
 Magnetic activity maps of the brain show what CT and MR cannot, May, p. 154.

BUSINESS & MARKETING

They came to praise CT, not to bury it, January, p. 5.
 NEMA and ACR approve standard for DIM interface, January, p. 16.
 Technicare contests federal court ruling on Fonar MRI patent, January, p. 29.
 RSNA exhibitors reassure physicians by following up on marketing hype, January, p. 33.
 Approved nonionic contrast agents pose cost quandary, February, p. 51.
 Finnish firm's 0.02-tesla unit installed in ER, February, p. 54.
 Report claims GE will offer low-field MR image by 1987, February, p. 56.
 Ausonics banks on multimodality breast imaging, February, p. 58.
 Suppliers help interventionalists in struggle to broaden influence, February, p. 62.
 Restrictions on health services limit imaging devices in Europe, February, p. 77.
 Radiologists modify adult-size systems for

pediatric work, March, p. 51.
 Phillips becomes more aggressive in digital market, March, p. 54.
 ADAC cuts staff by 25% in effort to pay off debt, March, p. 54.
 Slower sales and mature technology belie mammography's explosive potential, March, p. 60.
 Imatron takes aim at radiology market with dual-mode unit, April, p. 43.
 Field Effects working with GM on MRI system, April, p. 44.
 Resonex seeks sites for 0.4-tesla resistive MR imager, April, p. 49.
 GE will acquire Technicare assets, service contracts, May, p. 47.
 E-Z-Em searches for market niches to invest its cash, May, p. 61.
 Technicare users in quandary over future of MR units, June, p. 49.
 A radiologist watches Wall Street: whither 'General Electricare?', June, p. 50.
 Commercial infighting may be blurring value of bone mineral analysis systems, June, p. 53.
 Comparable pricing and quality make film a commodity, July, p. 47.
 Technicare soothes anxious customers; GE disquiets buyers, July, p. 55.
 Spotty sales show physician split over nonionics, July, p. 62.
 Suppliers excite prospective buyers with lower-priced PET systems, July, p. 65.
 GE will sustain MR development for Technicare sites, August, p. 51.
 MIT begins work on sodium imaging using IBM magnet, August, p. 53.
 Berlex will submit gadolinium agent for FDA review, August, p. 53.
 MR vendors encourage outside help in developing market for local coils, August, p. 61.
 To drive out inferior products, new devices must offer added value, August, p. 172.
 Ultrasound back from edge of commercial oblivion, September, p. 5.
 GE appoints medical unit head to R & D laboratory, September, p. 55.
 Squibb spins off ATL ultrasound into new firm, September, p. 55.
 Japanese seek MR system costing under \$500,000, September, p. 61.
 Matrix acquires phosphor assets from DigRad, September, p. 65.
 Phased arrays signal era of growth and improved status for ultrasound, September, p. 85.
 Acuson whiz kid fazes his competitors, September, p. 88.
 Fonar permanently in the fray despite its technical problems, September, p. 159.
 MRI equipment prices will fall as competition heats up, September, p. 192.
 GE and J & J sign agreement on Technicare, October, p. 51.
 A radiologist watches Wall Street: beware of stocks with lofty P/Es, October, p. 52.
 Plenty of bridges yet to cross on road to digital radiography, October, p. 155.
 Of basketball shoes and the quid pro quo,

November, p. 5
 Companies aim to perk up CT market with enhancements, November, p. 73.
 GE executive gives parting shots on imaging industry, November, p. 82.
 Squibb spin-offs to record sales of about \$250 million, November, p. 89.
 Ultrasound does whale of a job at marine park, November, p. 89.
 Reduced capacity and steady sales lift hopes of imaging industry, November, p. 109.
 Permanent magnet designs offer key to low-cost MRI, December, p. 47.

CARDIAC IMAGING

MRI gains ground in assessment of cardiac disease, February, p. 32.
Exercise echo provides new window on ischemia, February, p. 110.
 New imaging modes may replace cardiac catheterization, March, p. 33.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Cardiac imaging and surface coils among MRI research priorities, April, p. 101.
 MR spectra may indicate extent of ischemic damage, May, p. 19.
 Europeans share new data on cardiac and non-CNS MRI, May, p. 34.
 NMR Imaging is latest entry into low-cost market, May, p. 62.
Intrinsic contrast gives big boost to cardiac MRI, May, p. 108.
 In some cases, MRI found superior to angiography, June, p. 33.
New radiopharmaceuticals opening doors for SPECT, June, p. 94.
Diagnosis and management merge in clinical PET, August, p. 106.
 Transesophageal echo beat ECG in showing ischemia, September, p. 29.
 MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 Federal cost-cutting initiatives make their mark in cardiac imaging, October, p. 69.
 Direct viewing of coronary arteries the most ambitious use for cardiac MRI, October, p. 85.
Imaging the heart: diagnostic options flourish, October, p. 86.
Gated cine MRI reveals congenital cardiac defects, October, p. 98.
Cine CT's speed makes it a preferred cardiac tool, October, p. 112.
Digital angiography endures despite inauspicious start, November, p. 182.

CAROTID IMAGING

PTA is promising in helping treat carotid disease, October, p. 33.
 Duplex scanning furthers understanding of stroke, September, p. 122.

CHEST IMAGING

Interest growing in new aerosol imaging methods, January, p. 64.
 AIDS: Imaging an epidemic, January, p. 54.
 Multi-modality update on lung cancer imaging, February, p. 96.

Angiography still definitive test for lung and vein clots, July, p. 13.
 Digital processing of portable films can reduce need for repeat studies, July, p. 117.
 CT proves useful in pediatric hip, lung disorders, August, p. 42.
Pathophysiologic clues aid detection of pneumonias, October, p. 118.
 Dual-energy exam differentiates pulmonary nodules, November, p. 45.
Is CT past its prime? Not by the looks of it, November, p. 202.
 Gallium scans offer advantages in AIDS patients, December, p. 11.
 Accuracy of CT suspect in bronchogenic CA, December, p. 33.

COMPUTED TOMOGRAPHY

They came to praise CT, not to bury it, January, p. 5.
 No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
Multi-modality update on lung cancer imaging, February, p. 96.
 New imaging modes may replace cardiac catheterization, March, p. 33.
Pediatric imaging: reassessing the clinical options, March, p. 82.
Doppler harnesses flow in pediatric imaging, March, p. 94.
 CT and MR imaging maintain separate diagnostic roles, April, p. 11.
 CT shows best intracranial calcifications, April, p. 16.
 Grid improves accuracy of manual CT biopsies, April, p. 36.
 Imatron takes aim at radiology market with dual-mode unit, April, p. 43.
 Imaging modalities aid diagnosis in stroke victims, May, p. 11.
3-D display of CT data: new aid to preop surgical planning, May, p. 74.
Xenon CT helps reveal blood flow disorders, May, p. 92.
 QCT bone data can vary widely between systems, June, p. 45.
 Experts say lag in DRG adjustments is inappropriate, July, p. 24.
 MRI challenges CT for imaging of pituitary gland, July, p. 24.
 CT provides useful adjunct in detecting GI tract lesions, July, p. 33.
Algorithms aid selection of hip imaging techniques, July, p. 94.
 CT and MRI said to improve staging of adenocarcinoma, August, p. 33.
 CT proves useful in pediatric hip, lung disorders, August, p. 42.
 PET delineates gliomas better than CT or MRI, August, p. 45.
 CT and MR imaging aid assessment of sports injuries, September, p. 15.
 Imaging techniques improve diagnosis in stroke cases, October, p. 11.
 QCT and cine CT aid understanding of childhood bone, October, p. 17.
Cine CT's speed makes it a preferred cardiac tool, October, p. 112.
 Research groups claim MRI better than CT in

liver, November, p. 11.
 Cine CT may aid assessment of sleep disorder, November, p. 54.
Is CT past its prime? Not by the looks of it, November, p. 202.
 MRI is pushing aside CT in fight for supremacy, November, p. 388.
 PET and MRI join CT in managing head trauma cases, December, p. 13.
 CT beats x-rays for showing miner's emphysema, December, p. 16.
 Accuracy of CT suspect in bronchogenic CA, December, p. 33.

CONSULTATIVE RADIOLOGY

The radiologist as caring physician—focus on first trimester pregnancy loss, February, p. 87.
 As consultants, radiologists must balance use of new technologies with their costs, November, p. 142.

CONTRAST AGENTS

Nonionic agents extend safety of invasive studies, January, p. 70.
 Contrast agents enhance MRI of brain and spine, February, p. 11.
 Approved nonionic contrast agents pose cost quandary, February, p. 51.
 Paramagnetics show further use in MR imaging, March, p. 25.
 Interventional radiology group opens doors to new members, April, p. 105.
 New developments improve cerebral angiography exams, May, p. 15.
 Agents assist in MRI diagnosis of breast, liver lesions, May, p. 30.
 Spotty sales show physician split over nonionics, July, p. 62.
 Berlex will submit gadolinium agent for FDA review, August, p. 53.
 Fast scanning helps make abdominal MRI of more than academic interest, October, p. 137.
 Ferrite contrast may challenge gadolinium in MRI of liver, December, p. 166.

DIGITAL RADIOGRAPHY

Tomographic DSA said to reduce motion artifacts, January, p. 11.
 FDA sponsors university group in assessment of digital radiography, March, p. 47.
 Philips becomes more aggressive in digital market, March, p. 54.
 New developments improve cerebral angiography exams, May, p. 15.
 Digital radiography slowly emerges from pit of failed expectations, May, p. 125.
 Imaging techniques improve diagnosis in stroke cases, October, p. 11.
 Plenty of bridges yet to cross on road to digital radiography, October, p. 155.
 Dual-energy exam differentiates pulmonary nodules, November, p. 45.
Digital angiography endures despite inauspicious start, November, p. 182.
Pediatric DSA gaining diagnostic acceptance, November, p. 242.

EUROPEAN IMAGING

Restrictions on health services, Feb., p. 77.
 Duplex ultrasound becoming potent clinical tool in U.K., March, p. 127.
 Europeans share new data on cardiac and non-CNS MRI, May, p. 34.
 British radiologists face hard choices providing or avoiding new services, July, p. 121.
 No profit motive in MR imaging for West German radiologists, July, p. 146.
 MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 French radiology advances within centralized structure, November, p. 301.
 Reducing unnecessary x-ray exams need not be a painful process, December, p. 122.

FILM RECORDING

Lasers shed new light on digital film recording, March, p. 132.
 Comparable pricing and quality make film a commodity, July, p. 47.

GI IMAGING

Physician promotes double-contrast enema technique, January, p. 18.
Correlative studies reveal efficacy of GI radiology, May, p. 114.
 CT provides useful adjunct in detecting GI tract lesions, July, p. 33.
 Barium study helps detect presence of rectal ulcers, September, p. 31.
Early imaging may be key to stopping colon cancer, September, p. 135.
Is CT past its prime? Not by the looks of it, November, p. 202.
 Fluoroscopy exam proves accurate in regional enteritis, December, p. 31.

INTERVENTIONAL RADIOLOGY

Interventionalists seek to broaden horizons in therapy, January, p. 18.
 Suppliers help interventionalists in struggle to broaden influence, February, p. 62.
Intracranial embolotherapy: plugging aneurysms with balloons, February, p. 90.
 Interventionalists seek peer support while pursuing therapeutic strategy, February, p. 144.
 Argon laser offers adjunct to balloon angioplasty, March, p. 29.
Pediatric imaging: reassessing the clinical options, March, p. 82.
 Interventional radiology group opens doors to new members, April, p. 105.
 Percutaneous methods rival biliary endoscopy, May, p. 24.
 Angiography still definitive test for lung and vein clots, July, p. 13.
Transcatheter embolization thrives despite controversy, July, p. 102.
 British radiologists face hard choices providing or avoiding new services, July, p. 121.
 Aggressive therapy spares kidney in hypertensive cases, August, p. 11.
 Chemical agent dissolves gallstones in vivo in 12 hours, September, p. 11.
 Basket extraction proves safer in clearing esophagus, September, p. 21.

MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 PTA is promising in helping treat carotid disease, October, p. 33.
New technology extends utility of coronary PTA, October, p. 126.
 Laser PTA proves successful in total vessel occlusion, November, p. 29.
Neurointervention scoring some dramatic successes, November, p. 160.
Laser angioplasty: a new therapeutic option, December, p. 86.

LEGAL ISSUES

Beware of giving away control in contracting with a hospital, October, p. 63.
 Management of digital image data raises sticky legal issues, October, p. 150.
 Best protection against malpractice is improving high-risk diagnosis, November, p. 265.

LITHOTRIPSY

Report shows Medicare pricing program inhibits lithotripsy and PTCA, January, p. 25.
 No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 Investigators give ESWL high marks for stone therapy, February, p. 16.
Sounding out new options in renal stone therapy, May, p. 100.

MAMMOGRAPHY

No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 Younger physicians starting to follow ACS guidelines, February, p. 31.
 Ausonics banks on multimodality breast imaging, February, p. 58.
 Slower sales and mature technology belie mammography's explosive potential, March, p. 60.
 Dream of breast cancer screening may be sweet but not yet reality, March, p. 150.
 Light scanning may help reduce breast biopsies, May, p. 30.
 Agents assist in MRI diagnosis of breast, liver lesions, May, p. 30.
 Responding to the challenge of breast cancer screening, June, p. 69.
 Putting breast screening into action, June, p. 73.
 Screening techniques connect radiology with broader health concerns, June, p. 121.
 Taking seriously the call for cheaper mammograms, July, p. 5.
The breast cancer battle: screening with mammography, July, p. 84.
 West German study shows increase in bilateral cancers, August, p. 27.
Ultrasound a useful adjunct to breast mammography, September, p. 114.
 Ultrasound aids in screening accuracy, November, p. 253.

MEETINGS AND CONVENTIONS

No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.

Duplex ultrasound becoming potent clinical tool in U.K., March, p. 127.
 Interventional radiology group opens doors to new members, April, p. 105.
 Screening techniques connect radiology with broader health concerns, June, p. 121.
 British radiologists face hard choices providing or avoiding new services, July, p. 121.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 Fast scanning helps make abdominal MRI of more than academic interest, October, p. 137.

MISCELLANEOUS

Future of dental radiology: applying new technologies, February, p. 104.
 Image makers paid tribute at the Smithsonian, September, p. 36.
 Society promotes upgrading roles of female radiologists, October, p. 45.
1986 in review: New ways of cutting costs emerge, December, p. 102.

MONOCLONAL ANTIBODY IMAGING

PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 Recombinant DNA methods assume role in cancer imaging and treatment, November, p. 275.
 Initial results spur further progress in cancer antibody imaging, November, p. 278.
 Variety of monoclonal antibodies find place in tumor imaging, December, p. 111.

MRI-CLINICAL

No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 New MR technique may offer measure of blood flow, February, p. 27.
 Contrast agents enhance MRI of brain and spine, February, p. 11.
 MRI gains ground in assessment of cardiac disease, February, p. 32.
Multi-modality update on lung cancer imaging, February, p. 96.
 Clinicians use CSF flow artifacts to improve MRI, March, p. 11.
 Paramagnetics show further use in MR imaging, March, p. 25.
 In oligohydramnios, MRI may be choice for Ob evaluation, March, p. 33.
 New imaging modes may replace cardiac catheterization, March, p. 33.
 MR gains ground in assessment of pediatric disease, March, p. 40.
 Groups say MRI improves staging of prostate cancer, March, p. 42.
 Miami MR center opens doors for children only, March, p. 44.
Pediatric imaging: reassessing the clinical options, March, p. 82.
 Don't hold your breath waiting for efficacy studies, April, p. 5.
 CT and MR imaging maintain separate diagnostic roles, April, p. 11.
 Surface coils aid MRI of head, neck and spine,

April, p. 13.
 MR imaging proves cost-effective in diagnosing MS, April, p. 27.
 Kids react favorably to MRI compared to other techniques, April, p. 32.
 MR differentiates between adenoma, metastatic lesions, April, p. 34.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
MRI a new milestone in modern Ob care, April, p. 86.
 Europeans share new data on cardiac and non-CNS MRI, May, p. 34.
Flow MRI holds promise in vascular diagnosis, May, p. 84.
Intrinsic contrast gives big boost to cardiac MRI, May, p. 108.
 Ultrasound, MRI assess pediatric spinal disease, June, p. 9.
 In some cases, MRI found superior to angiography, June, p. 33.
 MR imaging proves useful in locating pelvic lesions, July, p. 11.
 MRI challenges CT for imaging of pituitary gland, July, p. 24.
 MRI evaluates shoulder disorders, meniscal tears, July, p. 36.
Algorithms aid selection of hip imaging techniques, July, p. 94.
 British radiologists face hard choices providing or avoiding new services, July, p. 121.
 Giving creative MRI ideas the exposure they deserve, August, p. 5.
 Structural data from MRI assists PET interpretation, August, p. 9.
 MR provides insight when sound waves cannot reach fetus, August, p. 11.
 CT and MRI said to improve staging of adenocarcinoma, August, p. 33.
 PET delineates gliomas better than CT or MRI, August, p. 45.
MR of the spine: showing defects without artifacts, August, p. 74.
MRI gives direct insight into the vagaries of MS, August, p. 82.
Scrutinizing knee joints: MRI offers new insight, August, p. 90.
MR reveals subtleties of head and neck pathology, August, p. 98.
 Advanced engineering and design expand utility of RF coils, August, p. 133.
 CT and MR imaging aid assessment of sports injuries, September, p. 15.
 MRI identifies splenic hematoma and diffuse disease, September, p. 25.
 MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 Imaging techniques improve diagnosis in stroke cases, October, p. 11.
 MRI strengthens its position in brain and spine, October, p. 20.
 MRI proves best in detecting acoustic neuroma, October, p. 29.
 Direct viewing of coronary arteries the most ambitious use for cardiac MRI, October, p. 85.
Imaging the heart: diagnostic options flourish, October, p. 86.
Gated cine MRI reveals congenital cardiac

defects, October, p. 98.
MRI contrast gives assist in limb salvaging efforts, October, p. 104.
 Fast scanning helps make abdominal MRI of more than academic interest, October, p. 137.
 MR quantification studies raise issue of what constitutes 'normal' tissue, October, p. 206.
 Research groups claim MRI better than CT in liver, November, p. 11.
 MRI offers early look at bone marrow disease, November, p. 21.
 Atherosclerotic disease shows up in MRI studies, November, p. 49.
 MRI proves useful, even superior to CT, in otolaryngology, November, p. 59.
Flexible pulsing sequences sharpen resolution of MRI, November, p. 172.
MRI challenges rivals in imaging the pelvis, November, p. 190.
 MRI is pushing aside CT in fight for supremacy, November, p. 388.
 Ferrite contrast may challenge gadolinium in MRI of liver, December, p. 166.
 PET and MRI join CT in managing head trauma cases, December, p. 13.
 MR provides assist in imaging pediatric mediastinal lesions, December, p. 21.
 PET brain mapping sets basis for new therapies, December, p. 25.

MRI-ECONOMICS

Analyst predicts improving profits for MRI centers, January, p. 16.
 Report claims GE will offer low-field MR image by 1987, February, p. 56.
 Financial analysis method allows for lower MR scan prices, February, p. 80.
 MR imaging proves cost-effective in diagnosing MS, April, p. 27.
 Medicare and Blues pay for MRI but many issues are unresolved, April, p. 53.
Outpatient MRI centers struggle for survival, April, p. 94.
 MRI centers may have tiger by the tail where they compete with hospitals, April, p. 144.
 NMR Imaging is latest entry into low-cost market, May, p. 62.
 No profit motive in MR imaging for West German radiologists, July, p. 146.
 FDA relaxes supplemental review and considers MRI reclassification, August, p. 47.
 MIT begins work on sodium imaging using IBM magnet, August, p. 53.
 Fitting MRI services into a mature imaging center, August, p. 69.
 Identify true costs of services in drawing up MRI business plan, September, p. 73.
 MRI equipment prices will fall as competition heats up, September, p. 192.
 Like nature, MR technology abhors an empty niche, December, p. 164.
 Contractors master siting problems as MR construction market peaks, December, p. 57.
 Clinician support is key to success in multimodality imaging centers, December, p. 69.
 Permanent magnet designs offer key to low-cost MRI, December, p. 47.

MRI-TECHNICAL

MRI field strength debate loses urgency but lives on, January, p. 105.
 Design of MR pulse sequences affects overall image quality, January, p. 109.
 New MR technique may offer measure of blood flow, February, p. 27.
 Upgrade packages help ensure state-of-the-art MR imaging, February, p. 115.
 MR suppliers' common goal: ghostbusting techniques, March, p. 109.
 Surface coils aid MRI of head, neck and spine, April, p. 13.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Cardiac imaging and surface coils among MRI research priorities, April, p. 101.
 Pretty MR pictures may not provide the best medicine, April, p. 112.
Flow MRI holds promise in vascular diagnosis, May, p. 84.
 Gapless imaging and rampable magnets may offer minimal advantages, May, p. 121.
 Patient motion 'the great equalizer' among MRI units, June, p. 10.
 MRI researchers test new sequences, probe non-hydrogen nuclei, June, p. 129.
 Letting off STEAM with new MRI acquisition technique, June, p. 159.
 3-D combined with fast MR improves imaging of small regions, July, p. 109.
 Imaging protocols of limited value in optimizing MRI, August, p. 23.
 MR vendors encourage outside help in developing market for local coils, August, p. 61.
 Rapid MRI scanning turns the corner with reduced flip angle techniques, August, p. 117.
 MRI users should stay flexible when designing pulse sequences, August, p. 174.
 Fonar permanently in the fray despite its technical problems, September, p. 159.
 Once abandoned, resistive magnet re-emerges as MRI contender, October, p. 133.
 Multiphase mode and cine display permit dynamic flow MR imaging, October, p. 163.
 Diffusion MRI shows promise in CNS disease, November, p. 31.
 Competition the driving force behind the rush into MRI services, November, p. 129.
Flexible pulsing sequences sharpen resolution of MRI, November, p. 172.
 Contractors master siting problems as MR construction market peaks, December, p. 57.
 Permanent magnet designs offer key to low-cost MRI, December, p. 47.

NEUROIMAGING

AIDS: Imaging an epidemic, January, p. 54.
 Contrast agents enhance MRI of brain and spine, February, p. 11.
 Clinicians use CSF flow artifacts to improve MRI, March, p. 11.
 Surface coils aid MRI of head, neck and spine, April, p. 13.
 CT shows best intracranial calcifications, April, p. 16.
 MR imaging proves cost-effective in diagnos-

ing MS, April, p. 27.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
 Imaging modalities aid diagnosis in stroke victims, May, p. 11.
 New developments improve cerebral angiography exams, May, p. 15.
 Xenon CT helps reveal blood flow disorders, May, p. 92.
Clinical PET opens gates to in vivo biochemistry, June, p. 82.
New radiopharmaceuticals opening doors for SPECT, June, p. 94.
Kinetics of Tc compound favor its use in SPECT, June, p. 112.
 MRI challenges CT for imaging of pituitary gland, July, p. 24.
 Structural data from MRI assist PET interpretation, August, p. 9.
 PET delineates gliomas better than CT or MRI, August, p. 45.
MR gives direct insight into the vagaries of MS, August, p. 82.
MR reveals subtleties of head and neck pathology, August, p. 98.
Diagnosis and management merge in clinical PET, August, p. 106.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 PET imaging, aids prognosis of stroke patients, September, p. 36.
Intraoperative sonography: localizing brain lesions, September, p. 106.
Duplex scanning furthers understanding of stroke, September, p. 122.
 MRI's utility in neuro diagnoses highlights Stockholm symposium, September, p. 149.
 Imaging techniques improve diagnosis in stroke cases, October, p. 11.
 MRI strengthens its position in brain and spine, October, p. 20.
 MRI proves best in detecting acoustic neuroma, October, p. 29.
 Diffusion MRI shows promise in CNS disease, November, p. 31.
 Doppler aids management of cerebral vasospasm, November, p. 39.
 MRI proves useful, even superior to CT, in otolaryngology, November, p. 59.
Neurointervention scoring some dramatic successes, November, p. 160.
 PET and MRI join CT in managing head trauma cases, December, p. 13.
 PET brain mapping sets basis for new therapies, December, p. 25.
 SPECT identifies Alzheimer's from other dementias, December, p. 31.
 MR spectra give clues to evolution of focal CNA injury, December, p. 33.

NUCLEAR MEDICINE

AIDS: Imaging an epidemic, January, p. 54.
 Interest growing in new aerosol imaging methods, January, p. 64.
Pediatric imaging: reassessing the clinical options, March, p. 82.
 PET promotes dreams about high-tech triumvirate, May, p. 5.
Clinical PET opens gates to in vivo biochemis-

try, June, p. 82.
New radiopharmaceuticals opening doors for SPECT, June, p. 94.
DPA gaining strength in bone scanning debate, June, p. 102.
Kinetics of Tc compound favor its use in SPECT, June, p. 112.
 New approach to improving PET camera resolution, June, p. 133.
 New radiotracers help revitalize nuclear imaging of the brain, June, p. 162.
 Imaging techniques crucial to diagnosis of GU diseases, July, p. 16.
 Suppliers excite prospective buyers with lower-priced PET systems, July, p. 65.
 An insider's view on risks and strategies in entrepreneurial MR imaging, July, p. 73.
Algorithms aid selection of hip imaging techniques, July, p. 94.
 Structural data from MRI assist PET interpretation, August, p. 9.
 Serial scintigraphy enhances follow-up of renal transplants, August, p. 37.
 PET delineates gliomas better than CT or MRI, August, p. 45.
Diagnosis and management merge in clinical PET, August, p. 106.
 PET and SPECT steal the show at nuclear medicine meeting, August, p. 123.
 PET imaging aids prognosis of stroke patients, September, p. 36.
 HCFA urged to reconsider rejection of PET coverage, October, p. 47.
Imaging the heart: diagnostic options flourish, October, p. 86.
 Gallium scans offer advantages in AIDS patients, December, p. 11.
 PET and MRI join CT in managing head trauma cases, December, p. 13.
 SPECT identifies Alzheimer's from other dementias, December, p. 31.
 Variety of monoclonal antibodies find place in tumor imaging, December, p. 111.
 PET brain mapping sets basis for new therapies, December, p. 25.
 Neck radiography overused in head injury patients, December, p. 26.

NUCLEAR ISSUES

Health issue of all time: preventing nuclear war, January, p. 126.
 Legislators limit malpractice awards; physicians analyze Chernobyl accident, July, p. 45.

OB/GYN IMAGING

Ultrasound detects Down's syndrome and IUGR in twins, January, p. 11.
 The radiologist as caring physician—focus on first trimester pregnancy loss, February, p. 87.
 In oligohydramnios, MRI may be choice for Ob evaluation, March, p. 33.
MRI of the body: Is there life beyond the CNS?, April, p. 70.
MRI a new milestone in modern Ob care, April, p. 86.
 MR provides insight when sound waves cannot reach fetus, August, p. 11.

Fetal portraiture helps to align ultrasound with traditional medicine, September, p. 97.
 FDA wants users warned against high-intensity ultrasound of fetuses, December, p. 77.
Sonography's visual detail assists in fetal medicine, December, p. 94.

PACS

How radiologists will win the information revolution, February, p. 5.
 NEMA and ACR approve standard for DIM interface, January, p. 16.
 Putting the squeeze on images through data compression, February, p. 142.
 Management of digital image data raises sticky legal issues, October, p. 150.
Costs remain imposing but PACS inch forward, November, p. 234.
 Interactive diagnostic display stations assist in management of digital images, November, p. 291.

PEDIATRIC IMAGING

MR gains ground in assessment of pediatric disease, March, p. 40.
 Miami MR center opens doors for children only, March, p. 44.
 Radiologists modify adult-size systems for pediatric work, March, p. 51.
 Decision-making in pediatric radiology: the case of hypertrophic pyloric stenosis, March, p. 75.
Pediatric imaging: reassessing the clinical options, March, p. 82.
Role of pediatric imaging in abdominal emergencies, March, p. 102.
 Imaging tools advance care of neonatal patients, March, p. 152.
 CT shows best intracranial calcifications, April, p. 16.
 Kids react favorably to MRI compared to other techniques, April, p. 32.
 Ultrasound, MRI assess pediatric spinal disease, June, p. 9.
 Imaging techniques crucial to diagnosis of GU diseases, July, p. 16.
 CT proves useful in pediatric hip, lung disorders, August, p. 42.
 QCT and cine CT aid understanding of childhood bone, October, p. 17.
 Fast noninvasive GFR test assesses infants, transplants, November, p. 63.
Pediatric DSA gaining diagnostic acceptance, November, p. 242.
 MR provides assist in imaging pediatric mediastinal lesions, December, p. 21.

PELVIC IMAGING

Groups say MRI improves staging of prostate cancer, March, p. 42.
 MR imaging proves useful in locating pelvic lesions, July, p. 11.
MRI challenges rivals in imaging the pelvis, November, p. 190.

PHYSICS

Design of MR pulse sequences affects overall image quality, January, p. 109.
 CT and MR imaging maintain separate diag-

nostic roles, April, p. 11.
 Pretty MR pictures may not provide the best medicine, April, p. 112.
 Digital radiography slowly emerges from pit of failed expectations, May, p. 125.
 Patient motion 'the great equalizer' among MRI units, June, p. 10.
 New approach to improving PET camera resolution, June, p. 133.
 Digital processing of portable films can reduce need for repeat studies, July, p. 117.
 FM sonography may offer hints into tissue characterization, September, p. 165.
 Eye-brain superior to any computer in detecting image patterns, October, p. 204.

PROSPECTIVE PAYMENT

Report shows Medicare pricing program inhibits lithotripsy and PTCA, January, p. 25.
 Experts say lag in DRG adjustments is inappropriate, July, p. 24.
 Federal cost-cutting initiatives make their mark in cardiac imaging, October, p. 69.
 Competition the driving force behind the rush into MRI services, November, p. 129.

RADIOPHARMACEUTICALS

New radiopharmaceuticals opening doors for SPECT, June, p. 94.
 Kinetics of Tc compound favor its use in SPECT, June, p. 112.
 New radiotracers help revitalize nuclear imaging of the brain, June, p. 162.
 Federal agencies to crack down on use of investigational radioactive drugs, September, p. 45.

REGULATORY ISSUES

Report shows Medicare pricing program inhibits lithotripsy and PTCA, January, p. 25.
 NIH to launch large-scale study of ultrasound's bioeffects, February, p. 47.
 Restrictions on health services, February, p. 77.
 FDA sponsors university group in assessment of digital radiography, March, p. 47.
 Federal budget reductions may affect funds for radiology practice, April, p. 41.
 Paying physicians in the future: implications for radiologists, April, p. 56.
 Major budget crunch at FDA slows agency response, June, p. 47.
 Legislators limit malpractice awards; physicians analyze Chernobyl, July, p. 45.
 Treating imaging devices as drugs bogs down FDA approval process, July, p. 144.
 FDA relaxes supplemental review and considers MRI reclassification, August, p. 47.
 Federal agencies to crack down on use of investigational radioactive drugs, September, p. 45.
 More accountability is needed in how HCFA handles its affairs, October, p. 5.
 HCFA urged to reconsider rejection of PET coverage, October, p. 47.
 Federal cost-cutting initiatives make their mark in cardiac imaging, October, p. 69.

FDA adopts strategy for discouraging rushed review of device applications, November, p. 67.
 Study may lead to overhaul of physician payment system, December, p. 43.
 FDA wants users warned against high-intensity ultrasound of fetuses, December, p. 77.

RENAL IMAGING

Imaging techniques crucial to diagnosis of GU diseases, July, p. 16.
 Transcatheter embolization thrives despite controversy, July, p. 102.
 Aggressive therapy spares kidney in hypertensive cases, August, p. 11.
 Serial scintigraphy enhances follow-up of renal transplants, August, p. 37.
 Fast noninvasive GFR test assesses infants, transplants, November, p. 63.
 Technical obstacles hinder spread of MR spectroscopy, November, p. 218.

SCREENING

Dream of breast cancer screening may be sweet but not yet reality, March, p. 150.
 Imaging tools advance care of neonatal patients, March, p. 152.
 Ultrasound output shows little relation to image quality, June, p. 13.
 Commercial infighting may be blurring value of bone mineral analysis systems, June, p. 53.
 Responding to the challenge of breast cancer screening, June, p. 69.
 Putting breast screening into action, June, p. 73.
 Screening techniques connect radiology with broader health concerns, June, p. 121.
 The breast cancer battle: screening with mammography, July, p. 84.
 Early imaging may be key to stopping colon cancer, September, p. 135.
 Prostate screening with ultrasound is hot, intriguing—and iffy, September, p. 194.
 Ultrasound aids in screening accuracy, November, p. 253.

SKELETAL IMAGING

Plain films best at revealing many bone, cord tumors, June, p. 30.
 QCT and cine CT aid understanding of childhood bone, October, p. 17.
 MRI contrast gives assist in limb salvaging efforts, October, p. 104.
 MRI offers early look at bone marrow disease, November, p. 21.

SOCIO-ECONOMIC ISSUES

Giving fourth party payers value for their money, January, p. 124.
 Approved nonionic contrast agents pose cost quandary, February, p. 51.
 Financial analysis method allows for lower MR scan prices, February, p. 80.
 Medicare and Blues pay for MRI but many issues are unresolved, April, p. 53.
 Paying physicians in the future: implications for radiologists, April, p. 56.
 Taking seriously the call for cheaper mammo-

grams, July, p. 5.
 Rationing of radiology places premium on prudent use of existing resources, November, p. 390.

SPECTROSCOPY

MR spectra may indicate extent of ischemic damage, May, p. 19.
 MRI researchers test new sequences, probe non-hydrogen nuclei, June, p. 129.
 Technical obstacles hinder spread of MR spectroscopy, November, p. 218.
 How MR spectroscopy is deployed depends upon intended goals, November, p. 311.
 MR spectra give clues to evolution of focal CNA injury, December, p. 33.

SPINAL IMAGING

Surface coils aid MRI of head, neck and spine, April, p. 13.
 3-D display of CT data: new aid to preop surgical planning, May, p. 74.
 Ultrasound, MRI assess pediatric spinal disease, June, p. 9.
 Plain films best at revealing many bone, cord tumors, June, p. 30.
 MR of the spine: showing defects without artifacts, August, p. 74.
 MRI strengthens its position in brain and spine, October, p. 20.
 Neck radiography overused in head injury patients, December, p. 26.

TELERADIOLOGY

Putting the squeeze on images through data compression, February, p. 142.
 Transmitting images via phone lines or microwave may become big business, May, p. 63.
 Definition of teleradiology changes as radiologists discover new uses, November, p. 119.

3-D IMAGING

3-D display of CT data: new aid to preop surgical planning, May, p. 74.
 Is CT past its prime? Not by the looks of it, November, p. 202.

TISSUE CHARACTERIZATION

FM sonography may offer hints into tissue characterization, September, p. 165.

TRAINING & CERTIFICATION

Must power structure fall for subspecialties to grow?, March, p. 5.
 Tuning up residency programs now to prevent radiologist glut later, April, p. 61.
 Interventional radiology group opens doors to new members, April, p. 105.

ULTRASOUND

Ultrasound detects Down's syndrome and IUGR in twins, January, p. 11.
 No bombshells at RSNA meeting but plenty of MRI refinements, January, p. 84.
 Ultrasound shows occult varicoceles in infertile males, February, p. 39.
 NIH to launch large-scale study of ultrasound's bioeffects, February, p. 47.

The radiologist as physician—focus on first trimester pregnancy loss, February, p. 87.
Exercise echo provides new window on ischemia, February, p. 110.

Pediatric imaging: reassessing the clinical options, March p. 82.

Doppler harnesses flow in pediatric imaging, March, p. 94.

Duplex ultrasound becoming potent clinical tool in U.K., March, p. 127.

Imaging tools advance care of neonatal patients, March, p. 152.

FM sonography reportedly superior to standard images, April, p. 36.

Diasonics achieves financial recovery, targets ultrasound, May, p. 59.

Ultrasound, MRI assess pediatric spinal disease, June, p. 9.

Ultrasound output shows little relation to image quality, June, p. 13.

Researchers detail potential errors in shoulder ultrasound, June, p. 15.

MR provides insight when sound waves cannot reach fetus, August, p. 11.

Ultrasound back from edge of commercial oblivion, September, p. 5.

Transesophageal echo beat ECG in showing ischemia, September, p. 29.

Phased arrays signal era of growth and improved status for ultrasound, September, p. 85.

Acuson whiz kid fazes his competitors, September, p. 88.

Fetal portraiture helps to align ultrasound with traditional medicine, September, p. 97.

Intraoperative sonography: localizing brain lesions, September, p. 106.

Ultrasound a useful adjunct to breast mammography, September, p. 114.

Duplex scanning furthers understanding of stroke, September, p. 122.

Sonography's impact on abdominal needle biopsy, September, p. 128.

Ultrasound has major role in managing racehorses, September, p. 142.

FM sonography may offer hints into tissue characterization, September, p. 165.

Prostate screening with ultrasound is hot, intriguing—and iffy, September, p. 194.

Imaging the heart: diagnostic options flourish, October, p. 86.

Doppler aids management of cerebral vasospasm, November, p. 39.

Ultrasound does whale of a job at marine park, November, p. 89.

Doppler blood flow imaging: integrating flow with tissue data, November, p. 146.

High-resolution sonograms resolve elusive details, November, p. 226.

Doppler ultrasound of practical value in abdominal and blood flow studies, November, p. 247.

Ultrasound aids in screening accuracy, November, p. 253.

FDA wants users warned against high-intensity ultrasound of fetuses, December, p. 77.

Sonography's visual detail assists in fetal medicine, December, p. 94.
